**Congratulations!**  
**You're Done!**

**Enjoy your new displays!**

## INSTALLING THE DISPLAY

**Step 1.** Gently pull out the magnetic face plate to a suitable angle/size to place the poster inside. **If you pull too hard you will break the unit.**

**Step 2.** Drill 2 holes in the wall. Before drilling the holes, you have to locate the hole center distance between two hanging fittings at the back of the light panel. See **(2B)** for measurements.

**Step 3.** Put a plastic insert into the holes just drilled.

**Step 4.** Mount the hanging hooks by a screw. Make sure the hooks are tapped firmly.

**Step 5.** Connect 1 positive (+) cable (the cable with the black stripe) and 1 negative (-) cable (white cable) to the hooks.

**Step 6.** Plug in the DC jack from a power adapter.

**Step 7.** Hanging the light panel to the hook, make sure the positive and negative adaptors on the back of the display line up with the positive and negative hooks.

**NOTE:** You can bring the power cables through the wall for a cleaner look. Call for special directions: 858.254.9619.
